Target Code

What is Target Code?

- Target Code is a specific revision of code that has met a minimum number of run time hours, installs and upgrades, and has demonstrated stability through customer usage.
- Target Code moves forward regularly as newer releases meet the criteria.
- Target Code is set at the third decimal place, and customers are encouraged to upgrade to the latest available patch level from the 'Drivers and Download' section of the Product Support Page.
- If a software version has recently been promoted to Target code, then "Latest Code" and "Target Code" for the product may be at the same revision of code.

Compatibility and Interoperability Solution: Please visit [E-Lab Navigator](#) for compatibility and Interoperability information on Target code/ Latest code for hardware and software configurations

LTS - Long Term Support

What is Long Term Support Release (LTS):

- An LTS release is a stable software release that is maintained with regular cadence of updates over a period of 3 years to ensure persistence for customers who seek a standard code line. LTS code lines offer support for a span of 3 years.
- New LTS code lines are initiated annually.
- LTS releases are set at the third number, and customers are encouraged to upgrade to the latest maintenance update from the 'Drivers and Download' section of the Product Support Page.
- Products following LTS will have no Target Code.
- To learn more about LTS, refer to [LTS Customer Support Summary](#) document.

PowerProtect DD

Dell Product Family	Latest Code	Release Date	Run Time Hours	LTS Releases	LTS Declared Date	LTS Run Time Hours
