Entuity Technical Note – Logging to non-standard directories

TECHNICAL NOTE FEBRUARY 9, 2023

Version 2023.02.09

In Entuity v20.0 P04, installations that do not use the standard log directory will break. This is because in such installations the \$(ENTUITY_HOME)/log directory, which in Entuity is hardcoded into the startup_UNIX.cfg file (Linux) and startup_WIN32.cfg file (Windows), is missing.

Although Entuity processes will run after Entuity is started, users will see a 404 error when attempting to access the Entuity login page.

To fix this issue, users should navigate to the etc/startup_UNIX.cfg file (Linux) or etc\startup_WIN32.cfg file (Windows) and amend the line containing 'sso' to the following:

```
--Drssso.log.dir=${logdir}
```
